CONFERENCE

In 2012, I co-organized a multi-disciplinary forum with Joseph Buckhalt on sleep and child development, funded in part by the Society for Research in Child Development. We hosted the conference at Auburn University. The overarching goal of the forum was to promote dialogue, identify pivotal areas in the study of children's sleep, and integrate knowledge of sleep and child development across disciplines towards making conceptual and methodological advances. I have co-edited an SRCD Monograph (2015) with Avi Sadeh, which presents the Forum's recommendations for next steps in sleep and child development research.

SCHOLARLY PROGRAM AND ONGOING RESEARCH

My work addresses child development in the context of risk and has advanced a biopsychosocial approach for understanding adaptation and maladaptation. More specifically, my research examines child functioning across multiple domains (psychological adjustment, physical health, cognitive functioning, academic achievement) in the context of familial risk (e.g., marital aggression, child abuse, parental alcoholism) and the socioecological milieu (e.g., health disparities associated with poverty and ethnic minority status). Of particular emphasis is the assessment of children's physiological and biological reactivity and regulation examined through sympathetic and parasympathetic nervous system activity, hypothalamic-pituitary-adrenal-axis activity, and sleep-wake parameters, which are examined as primary mechanisms of risk and vulnerability/protective factors. Incorporating such a wide lens and connecting different levels of influence (physiological to societal) characterize my scholarship, which has led to novel contributions towards a nuanced understanding of development in youth. A recognized

feature of my research, facilitated by instrumental collaborations with colleagues from various disciplines, is its multi- and inter-disciplinary nature and its building of bridges across many areas of inquiry concerned with child health and development including psychology, family functioning, pediatric sleep medicine, psychophysiology, public health and health disparities.
